FDD Abstract of [REDACTED]

INSTRUCTIONS TO R&D MAGDEBURG, SCHWERIN, BERLIN LOCOMOTIVE ENGINEERS (29 pp;  
German; Dec 1951)

25X1X

This document is a photostat copy of three route-instruction booklets published biweekly by the Reichsbahn Directorates (R&D) in the German Democratic Republic for the use of their locomotive engineers. These particular booklets cover the period from 16 December to 29 December 1951 and are issued by R&D's Magdeburg, Schwerin, and Berlin. The booklet issued by the R&D Berlin contains a sketch of the Gruenau connection curve. Attached to the booklet issued by the R&D Schwerin is an index map of the railroad network of that R&D.

The route instructions list all locations along the right of way under the jurisdiction of the respective R&D's which, during the period covered, required special attention of the locomotive engineers. The information is broken down by railroad lines (in numerical but necessarily incomplete order) and within those lines again by sectors (numbered consecutively regardless of lines) or by kilometer points within sectors.

The 9 columns under each item are headed as follows: 1. Consecutive number; 2. Sector (at operational office or between operational offices); 3. Location; 4. Irregularities and speed limit; 5. Time of day or type of train concerned; 6. Valid from . . . (date); 7. Valid until . . . (date); 8. Loss of time to be expected in either direction; 9. Reason and miscellaneous remarks.

The information covers in either direction such items as stops for train control; reduced speed at temporary bridges, at curves, or at track sections under repair; poor track condition; danger of fire through sparks from the locomotive. For many bridges instructions are given to close the ashpan and not to fire the locomotive.

Foreign language document or a microfilm of it [REDACTED] is available from CIA  
Library, Ext 35057
